RFQ

1. Why is Ultrasonic Cleaning so Efficient and Effect?

When cavitation happens near a dirty object, the vacuum action produced by those million of bubbles constantly imploding creates a tiny pressure wave that reaches deep into every nook and cranny of even the most delicate items. This tiny pressure wave dislodges and breaks up the dirt and other contaminants and gently lifts it away. The result is very fast and effective cleaning.

2. How to choose a suitable ultrasonic cleaner?

When you contact us regarding a suitable cleaner, please provide the following information:

What type of object do you want to clean (metal, plastic, jewellery etc.)?

What type of contaminants do you want to remove from the object?

How large is the object and how many do you need to clean?
