Product Description

38L Large Tank Laboratory Ultrasonic Cleaner 720W with Heating Function

Laboratory ultrasonic cleaner

Mainly used for cleaning various laboratory instruments, containers, various oral liquid containers, food glass metal containers, cosmetics containers, packaging containers, dental appliances cleaning and inspection boards.

More and more laboratories are aware of the convenience and practicality of ultrasonic cleaning. For the inner wall of the experimental glassware, it has always been difficult for people to wash it by hand, and the laboratory ultrasonic cleaning machine solves this problem very well.

Because the energy of ultrasonic waves can penetrate the inner walls of glassware and tiny gaps, small holes, and dead ends, it can be used to clean any glassware, test tubes, beakers, parts or assemblies. When the parts to be cleaned are precision glassware, parts or assemblies, ultrasonic cleaning is often the only way to meet their special technical requirements.

Specification:
