Product Description

50L Ultrasonic Cleaner Machine for Chemical Vessels and Device with Heater

In the production process of electronic devices, semiconductor materials, metals, and utensils must be cleaned. Cleaning is the process of removing various harmful substances adsorbed on the surfaces of semiconductor materials, metal materials, and production utensils. The cleaning method is to use an ultrasonic cleaner with a cleaning agent to desorb impurities from the surface of the object to be cleaned, thereby obtaining a clean surface.

Chemical cleaning mainly includes three aspects:

1. Surface cleaning of semiconductor materials
2. Cleaning of metal materials (including dopants) used in the production process
3. Cleaning of utensils and utensils used in the production process.
