Product Description

3.2 liters bench top ultrasonic cleaner SUS304 tank with degas and semi-wave function for Lab

How does an ultrasonic cleaner?

This is a method of cleaning both sweet and powerful.

Ultrasound form of pressure variations that propagate through the material immersed in a liquid. These high-frequency vibrations produce millions of tiny microscopic bubbles whose characteristic is to implode immediately, releasing high energy causing the detachment of impurities even in inaccessible corners. Meanwhile, the collapse of these bubbles generates movements in the bath, conducive to cleaning.

Water can get inside all crevices, every corner, every even the smallest cavities, the ultrasonic cleaner can clean complex parts and remove small particles that can not be cleaned by hand

This gentle cleaning method completely eliminates all impurities, dirt, oxidation, oil, grease, carbonized deposits and contaminants from all surfaces of objects that are in contact with the cleaning liquid.
