Benefits of ultrasonic cleaning:

- Used for a wide range of workpiece shapes, sizes and materials
- The ultrasonic cleaning process gently moves parts to assist with cleaning; this mitigates the risk of damage to industrial parts during cleaning
- May not require the part to be disassembled prior to cleaning. Lower labor costs equal increased profits.
- Water, soap and green-friendly solvents are environmentally safe. Ultrasonic cleaning reduces/replaces hazardous cleaning solvents
- Short cycle times save time, money and increase plant efficiency

Costs of ultrasonic cleaning:

Some electronic components such as MEMS devices like gyroscopes, accelerometers and microphones can become damaged or destroyed by the high-intensity vibrations they are subjected to during ultrasonic cleaning.
