Product Description

2500ml dental ultrasonic cleaner with timer and heating and timer SUS 304 inner tank material

What is an ultrasonic cleaner?

The transducers are devices that convert electricity into the movement that allows cavitation to take place.

Cavitation is a phenomenon from which millions of nanometric bubbles are generated and then compressed inside the liquid in the tank, imploding and releasing large amounts of energy. When the energy collides with dirt, grease or dust adhered to the surface of the parts, it removes them without damaging the part, carrying out a cleaning process far beyond any other traditional system.
