#### LOWER ENERGY BILLS

The Skymen Clean Tank System can save a single kitchen location thousands of \$\$ per year in energy costs.

Kitchens can use up to 3 times more energy than other commercial facilities. Much of this energy comes from heating water to clean equipment as well as heating stoves to cook food.

Standard 3-compartment sinks and power sinks must be regularly refilled with hot water to maintain the appropriate sanitary conditions, and dish and pot washer machines dispose of the heated water with each washing cycle.

The equipment cleaned in traditional sinks does not remove the baked on coated carbon crust and that makes them harder to heat on a stovetop, creating an inefficient cooking process that wastes gas and or electricity.

The Skymen Clean Tank System Double walled insulated Tank is Thermostatically controlled so water is kept at a constant 75 degrees and equipment comes out perfectly clean and sanitised. By using The Skymen Clean Tank System you potentially eliminate the need to heat up to Thousands of Litres of running hot water per year and save Kw-hours used per year.
