Don't replace filters when they become clogged with dirt, grease or other contaminants; ultrasonic cleaners can restore many types of filters to look and function like new

Ultrasonic parts washers are particularly effective for filters made of metal or plastic mesh; the gentle yet powerful process is much less damaging than traditional cleaning methods that use a brush and high-velocity chemical cleaning solutions. Ultrasonic cleaners use water based solutions that won't damage filters yet reach every crack and crevice for the best possible clean.

Ultrasonics efficiently removes:

carbons
varnishes and paints
petrochemicals
oil and grease
metal shavings
lubricants
rusts
carcinogens
polymers

Benefits of ultrasonics for filters:

Cleans delicate parts without damage
Cleans **cracks and crevices** that would be difficult to reach with the hand
Does not require line-of-sight for effective cleaning
Doesn't use harsh chemical solvents that are dangerous for workers and the environment
Safe for aluminum, magnesium and zinc
Biodegradable cleaner
Clean multiple pieces at once without having to brush by hand – saves time and money
