## Product Description

### 8500L Ultrasonic Cleaning Machine For Plate Heat Exchanger SUS304 Material

#### Ultrasonic cleaning of metal heat exchanger

It is well known that after the metal bar is extruded into a wire, the outer part of the wire often has a layer of carbonized film and oil. It is difficult to remove the dirt (especially the whole wire) by acid cleaning or other cleaning methods. The ultrasonic wire washing machine is According to the actual production needs, a continuous wire-cutting and high-efficiency cleaning equipment is used. The rough washing part is composed of a cleaning liquid storage tank, a transducer, a circulation pump, a filter and a matching piping system. After the wire is ultrasonically washed and washed, And then blow dry to complete the entire cleaning process. The integrated control of the whole set of equipment is simple, convenient and effective. It is widely used in other wires such as silk, tungsten wire, molybdenum wire, silk wire and copper wire (before the coating of insulating paint).

# CLEANING EFFECT

Better cleaning when cleaning with detergent

Skymen Cleaning Equipment Shenzhen CO., Ltd.

Parts that are cleaned of large amounts of dirt are generally pre-cleaned by dipping, spraying, etc. After removing most of the dirt, the remaining dirt is ultrasonically cleaned, and the effect is good. If you clean small items and complicated shapes (parts), if you use a cleaning net or rotate the cleaning object, you can use ultrasonic radiation while vibrating, and you can get even cleaning.
