Product Description

Product Overview

Ultrasonic Cleaning of Printing Cylinder and Anilox Rolls Ultrasonic Cleaner

Skymer Ultrasonic system for cleaning of printing cylinders was designed to clean and restore cylinder surface. Cavitation bubbles created by ultrasounds smoothly removes dirt from the rolls' surface avoiding any wear or tear on the rolls. Whole cleaning process requires three steps. Firstly, ultrasonic cleaning operation which release dirt then rinsing operation with demi-water to splash all the released dirt and finally drying. This solution provides fast and effective way to remove ink, silicon and other dirt from printing rolls.

□ Ultrasonic anilox roll cleaning machine

Ultrasonic anilox roll cleaning machines are fully automated for roll and sleeves maintenance. Individually designed to deep clean anilox rolls, sleeves, or gravure cylinders of all sizes, they will help you reduce set-up times, minimize press downtime, increase the lifetime of the rolls and optimize printing quality. Ultrasonic anilox roll and sleeve cleaners are a perfect solution for daily washing and maintenance of the rolls. The short and gentle cleaning process leaves the rolls perfectly clean and ready for use in 25 minutes without causing any wear or tear to the roll. Cleaning machines have been designed to work with all types of ink. The water consumption is very low and the cleaners have a built-in cleaning agent circulation system that allows re-use of the liquid.
