Product Description

Ultrasonic Cleaner for Precision Metal Stamping Parts 3 Gallon Ultrasonic Bath

Degassing is used for the reliable removal of gas from samples (e.g. for the removal of carbon dioxide) or for the degassing of HPLC solvents in the analytical lab.

Mixing combines two liquids that are not ordinarily mixable, e.g. oil in water.

Dispersing is used with for substances that are not ordinarily mixable, for example solid substances in liquid such as pigments in water.

Cleaning applies to laboratory glassware or laboratory instruments, even joints of articulated components and in hollow bodies. A special application is cleaning analytical sieves. Combined with elma lab clean chemicals this is an environmentally friendly application.
