## Product Description

### Ultrasonic Cleaner for Precision Hardware Parts 15L Ultrasonic Bath

An ultrasonic cleaner is a device that cleans items by using ultrasound and water or an appropriate cleaning solvent.

Also, it can be said to be a machine that offers the complete and rapid removal of dirt, germs, and other contaminants from items that are put in a tank of water that is agitated with sound waves having a high frequency.

Every ultrasonic cleaner is not constructed to be equal. There are some with bigger sizes, while you can also get a portable ultrasound machine.

They all serve the same purpose, which is cleaning, but they sometimes meet different, specific needs.

## Before & After Cleaning Comparison

Safe, easy-to-use ultrasonic cleaners from Grainger can be especially effective for cleaning metal and plastic machinery and parts. Choose the size, timing and heat options to fit specific cleaning tasks, such as removing blood, proteins and contaminants from glassware and lab instruments; eliminating dirt, grease, waxes and oils from switches and gears and cleaning flux and contaminants from electronics
