Description of Ultrasonic Cleaner

Ultrasonic cleaning is a modern, safe, efficient, most economy and fastest way for effectively removing of contaminants and tenacious deposits from objects with complex geometry. The ultrasonic cleaning benefits consist of a deep cleaning of the objects and the elimination of the risk of injury or infection with manual cleaning.

The ultrasonic cleaning process provides high quality cleaning and exceeds, by ease of use and end result, conventional cleaning methods. The tiny microscopic bubbles generated by the transducers provide cleaning of very difficult, irregular and complex parts. Even inaccessible areas can be cleaned without any trace of physical cleaning (scratches, etc...). Special for cleaning electronic tool, jewelry, glasses, dental instruments, lab instruments, hospital instruments.
