Product Description

High Quality Immersible Ultrasonic Transducer Plate Industrial Ultrasonic Cleaner

Description of Ultrasonic Cleaner

Ultrasonic cleaning is a modern, safe, efficient, economical and fastest method to effectively remove contaminants and stubborn deposits from complex geometries. The benefits of ultrasonic cleaning include deep cleaning of objects and eliminating the risk of injury or infection from manual cleaning.

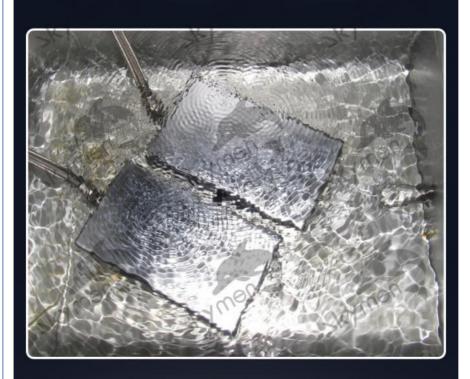

An ultrasonic cleaner is a microprocessor-controlled device that uses ultrasound, or high-frequency sound waves, to clean jewelry and other delicate items. Ultrasonic cleaning is based on the cavitation effect caused by high-frequency ultrasonic vibration signals in the fluid. The expansion and rapid collapse of tiny air bubbles causes cavitation, which produces an effective cleaning action on the surface of the object being cleaned. In addition, the air bubbles are so small that they can penetrate even the smallest cracks, cleaning them thoroughly and continuously.
