Product Description

Skyemen JP-480ST 175L Industrial Ultrasonic Cleaner

Professional industrial ultrasonic cleaning machine designed for effective oil removal, rust removal, and comprehensive cleaning of metal, glass, and plastic surfaces.

How Industrial Ultrasonic Cleaning Works

Specially designed transducers convert electrical energy into mechanical vibrations that are transmitted into the cleaning liquid. This creates microscopic vacuum-filled bubbles that rapidly implode through a process called cavitation. The resulting energetic liquid jets effectively remove all types of contamination from surfaces, ensuring thorough cleaning of every surface in contact with the fluid.
