Product Description

Skymen JP-480ST 175L Industrial Ultrasonic Cleaner

Professional industrial ultrasonic cleaning machine designed for effective oil removal, rust removal, and comprehensive cleaning applications across various materials.

Industrial Ultrasonic Cleaning Technology

Specially engineered transducers convert electrical energy into high-frequency mechanical vibrations. These vibrations propagate through the cleaning solution, generating microscopic vacuum-filled bubbles that rapidly implode. This cavitation process releases powerful liquid jets that effectively remove all types of contaminants from metal, glass, and plastic surfaces, ensuring thorough cleaning of every surface in contact with the fluid.
