HOW DO ULTRASONIC CLEANERS WORK?

Ultrasonic Cleaning is based on a Cavitation Effect caused by high frequency ultrasonic wave vibrations in fluid. Microscopic bubbles are formed and they implode violently which causes Cavitation. This Cavitation gives out a great impact to the object(s) you are cleaning and provides an intense scrubbing action to the surface of the object. These bubbles are actually small enough to penetrate even microscopic crevices and cleans them thoroughly and consistently.

WHAT CAN YOU CLEAN WITH AN ULTRASONIC CLEANER?

You can clean any of the following objects with an Ultrasonic Cleaner:

Jewelry, Dental & Surgical Instruments, Dentures, Lenses & Eye Glasses Automotive & Aviation components, Watches & Clockwork Parts, Ink Jet Cartridges, Computer Plotter Pens, Air Brushes - Spray Guns, Archival Papers, Calligraphic Pens, Laboratory Glassware, Metal Fibre Filters & Rubber Seals, Microelectronic Circuits & Small Components and Printed Circuit Boards.
