Product Description

Ultrasonic Stencil Cleaner JP-060S ultra soni wave cleaning machine for stencil

What is ultrasonic cleaner?

The transducers are devices that converts electricity into the movement that allows **cavitation** to take place. In other words, transducers enable the cleaning of the part inside the tank. Cavitation is a phenomenon from which **millions of nanometric bubbles** are generated and then compressed inside the liquid in the tank, imploding and **releasing large amounts of energy**. When the energy **collides with dirt, grease or dust adhered to the surface of the parts** it removes them **without damaging** the part, carrying out a cleaning process far beyond any other traditional system.

JP-060S, ultrasonic stencil cleaner consists of 6pcs transducers, PCBA and machine body so on.
