Product Description

JP-4820 Household Ultrasonic Cleaner for brass , 40KHz 2.5 Liter Ultrasonic Cleaner heating function

What is an ultrasonic cleaner?

The transducers are devices that converts electricity into the movement that allows cavitation to take place. Cavitation is a phenomenon from which millions of nanometric bubbles are generated and then compressed inside the liquid in the tank, imploding and releasing large amounts of energy. When the energy collides with dirt, grease or dust adhered to the surface of the parts, it removes them without damaging the part, carrying out a cleaning process far beyond any other traditional system.

JP-4820 is with heating function(to 65°C) and the lid can be detachable.
