Why ultrasonic cleaner ?

Electrical energy is converted into mechanical vibrations thanks to special elaborated transducers. These vibrations are transferred into the fluid through the walls of stainless steel. This creates tiny microscopic vacuum bubbles, which cause consecutive implosions (cavitation). The high-energy jets that are thus created can efficiently remove dirt from surfaces and materials placed in the cleaning bath.

How to use the machine ?

- 1) Just need to fill in the water with tank, over 3/2 lines, below max line.
- 2) Put the medical tools in the stainless tank,
- 3) Setup ultrasonic time and water temperature .
- 4) wait till and washing cycle finished.
